

# Validation results

This document lists detailed evaluation metrics for the MIMIR inference engine<sup>1</sup> for image-based deep regression on UK Biobank data. All listed metrics resulted from 10-fold cross-validation.

## 1 Evaluation Metrics

The tables contain the following columns:

<b>Description</b>	A descriptive term for the estimated measurement or property, taken either from the UK Biobank Showcase or assigned from external sources
<b>Field</b>	The UK Biobank field ID (Left blank if the reference values were not obtained from UK Biobank)
<b>N</b>	Number of subjects
<b>Unit</b>	Measurement unit
<b>ICC</b>	Intraclass correlation coefficient, using a two-way random, single measures, absolute agreement definition
<b>R<sup>2</sup></b>	Coefficient of determination
<b>MAE</b>	Mean absolute error
<b>MAPE</b>	Mean absolute percentage error <sup>3</sup>

Additional documentation on each target can be found by searching for a given field ID in the publicly accessible UK Biobank showcase:

<https://biobank.ndph.ox.ac.uk/showcase/search.cgi>
